📍 Moscow, Russia

Backend engineer building distributed systems in Go. Implemented the Raft consensus algorithm from scratch and shipped a Kafka-based audit platform with HA failover. Currently working on cloud VM orchestration at T-Bank and developing Landly — an AI-powered SaaS for landing page generation. MIPT graduate looking for senior backend, distributed systems, or AI infrastructure roles.

SELECTED PROJECTS

Raft github.com/DimaGlobin/raft

Implemented the Raft consensus algorithm from scratch in Go to deeply understand distributed coordination. Handles leader election, log replication with quorum guarantees, and network partition recovery. The same algorithm powers etcd, Consul, and CockroachDB.

Stack: Go 1.23, Docker Compose, slog

Audit Service github.com/DimaGlobin/audit_service

Production-grade audit logging service for distributed systems. Supports both Active/Active load balancing and Active/Passive failover via Nginx, with full Prometheus + Grafana observability. Designed to mirror what fintech and healthcare compliance systems require.

Stack: Go, Kafka, PostgreSQL, Nginx, Prometheus, Grafana

Landly github.com/DimaGlobin/landly

AI-powered SaaS for landing page generation, built solo end-to-end. Supports multiple LLM providers behind a single abstraction (OpenAI, Anthropic). Atomic deploy pipeline with S3 manifests ensures users never see broken intermediate states. Production-deployed on Yandex Cloud.

Stack: Go 1.23, Next.js 14, PostgreSQL, Redis, S3, Yandex Cloud

EXPERIENCE

Golang Developer

since Mar 2026

Middle · T-Bank, Moscow

- Building VMaaS — internal cloud platform for product teams to provision and manage VMs through a unified API
- Working with OpenStack (Nova, Keystone, Neutron) for VM lifecycle and integrating LDAP/FreeIPA for centralized identity
- Stack: Go, OpenStack, LDAP, FreeIPA, PostgreSQL, Docker

Golang Developer

2024 — 2026

Middle · Cyberprotect, Moscow

- Designed and led development of the audit subsystem within the DLP product
- Drove system design discussions for new backend modules and service boundaries
- Implemented secure services with role-based authN/Z, JWT rotation, and centralized secrets management
- Stack: Go, PostgreSQL, MSSQL, GitLab CI

Golang Developer

2023 — 2024

Junior · Cyberprotect, Moscow

- Delivered DLP web console features end-to-end, from spec refinement with PMs to production release
- Optimized heavy MSSQL/PostgreSQL queries with indexing and batching to improve response times on critical endpoints
- Wrote unit and integration tests; raised reliability via CI checks and structured logging
- Stack: Go, MSSQL, PostgreSQL, GitLab CI

Golang Developer

Summer 2023

Intern · Cyberprotect, Moscow

- Built REST API for large-file ingestion with chunked uploads, back-pressure, and retry logic; sustained throughput under load
- Designed PostgreSQL schema and performant queries for the ingestion pipeline
- Implemented JWT authentication and a permissions model from scratch
- Stack: Go, REST, Docker, PostgreSQL

CORE SKILLS

TECHNICAL

Go, PostgreSQL, MSSQL, Redis, Kafka, Docker, Nginx, OpenStack, LDAP/FreeIPA, Prometheus, Grafana, GitHub Actions, GitLab CI, system design.

DISTRIBUTED

Raft consensus, Kafka consumer groups, HA load balancing.

API & SECURITY

REST, OpenAPI 3.0, JWT rotation, RBAC.

EDUCATION

MIPT (Moscow Institute of Physics and Technology) 2021 — 2025

B.Eng., Radio Engineering and Computer Technology

MIPT (Moscow Institute of Physics and Technology) 2025 — present

M.Sc., Radio Engineering and Computer Technology

FOCUS AREAS

Distributed systems
Event-driven architectures
Cloud-native backend

LANGUAGES

Russian — native
English — B2, comfortable with technical communication and code reviews
