📍 Moscow, Russia

Backend engineer with 3+ years building distributed systems in Go. Shipped a Kafka-based audit platform with HA failover and full products end-to-end, including Landly, an AI-powered SaaS for landing page generation. Currently building cloud VM orchestration at T-Bank — a self-service platform managing ~15,000 VMs across four cloud providers. MIPT graduate seeking senior backend, distributed systems, or AI infrastructure roles.

SELECTED PROJECTS

Audit Service github.com/DimaGlobin/audit_service

Production-grade audit logging service. Active/Active load balancing and Active/Passive failover via Nginx, with full Prometheus + Grafana observability — mirroring fintech and healthcare compliance.

Stack: Go, Kafka, PostgreSQL, Nginx, Prometheus, Grafana

Landly github.com/DimaGlobin/landly

AI-powered SaaS for landing page generation, built solo end-to-end. Multiple LLM providers behind one abstraction (OpenAI, Anthropic); atomic S3-manifest deploys prevent broken intermediate states. Production-deployed on Yandex Cloud.

Stack: Go 1.23, Next.js 14, PostgreSQL, Redis, S3, Yandex Cloud

MatchMe github.com/DimaGlobin/matchme

Full-featured dating app built solo end-to-end. Go backend with swipe matching, real-time chat, OTP auth, subscriptions, and push notifications, plus an AI chatbot that suggests replies from conversation history. Flutter mobile client.

Stack: Go, PostgreSQL, Redis, S3, Nginx, Docker, Flutter

EXPERIENCE

Golang Developer

since Mar 2026

Middle · T-Bank, Moscow

- Architected and built core modules of VMaaS, an internal self-service platform: dev teams provision VMs in minutes vs. manual OpenStack/VMware setup
- Own VM image management, console-log access, and Windows-VM access control across a fleet of ~15,000 VMs
- Platform spans 4 cloud providers (OpenStack, Yandex Cloud, GCP, AWS) and 4 guest-OS families behind one unified API
- Stack: Go, Kubernetes, OpenStack, Kafka, Redis, MongoDB, ClickHouse, ELK, LDAP/FreIPA, Prometheus/Grafana

Golang Developer

2024 — 2026

Middle · Cyberprotect, Moscow

- Designed and delivered the DLP audit subsystem from scratch (schema, services, ingestion), tracking security-officer actions in the web console at 10k+ events/day
- Led system design for new backend modules — defining service boundaries and API contracts that unblocked parallel work across teams
- Hardened platform security with RBAC, automated JWT rotation, and centralized secrets management
- Stack: Go, PostgreSQL, MSSQL, GitLab CI

Golang Developer

2023 — 2024

Junior · Cyberprotect, Moscow

- Owned 2 major DLP features end-to-end through release; contributed to many more across quarterly cycles
- Cut critical-endpoint response times ~50% by rewriting heavy MSSQL/PostgreSQL queries and adding targeted indexes
- Wrote functional tests for all new API endpoints and delivered full functional coverage of the Events module
- Stack: Go, MSSQL, PostgreSQL, GitLab CI

Golang Developer

Summer 2023

Intern · Cyberprotect, Moscow

- Built a REST API for large-file ingestion (chunked uploads, back-pressure, concurrent batch processing); later folded into the DLP shadow-copy feature
- Designed the ingestion schema; implemented JWT auth and a permissions model from scratch
- Stack: Go, REST, Docker, PostgreSQL

CORE SKILLS

TECHNICAL

Go, Kubernetes, Docker, OpenStack, Kafka, Redis, PostgreSQL, MongoDB, ClickHouse, MSSQL, ELK, Nginx, LDAP/FreIPA, Prometheus/Grafana, GitHub Actions, GitLab CI, system design.

DISTRIBUTED

Kafka consumer groups, transactional outbox, HA load balancing, Raft consensus.

API & SECURITY

REST, OpenAPI 3.0, JWT rotation, RBAC.

EDUCATION

MIPT (Moscow Institute of Physics and Technology) 2025 — present
M.Sc., Radio Engineering and Computer Technology

MIPT (Moscow Institute of Physics and Technology) 2021 — 2025
B.Eng., Radio Engineering and Computer Technology

FOCUS AREAS

Distributed systems
Event-driven architectures
Cloud-native backend

LANGUAGES

Russian — native
English — B2, comfortable with technical communication and code reviews
